

Premium Deals Near Florida

Discover the best yachts available right now. These premium selections are hand-picked from trusted sellers across Florida.

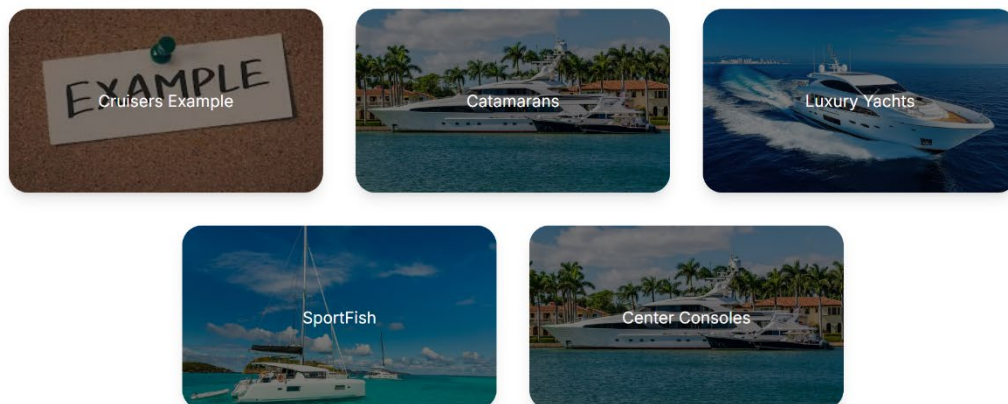

- Premium Deals should default to the most current listings for now. Or most recently added. That way we show something on the home page.

Header location does not allow me to change location? Is this IP related to your active location? If so that is ok. But maybe it should read location and show city and state.

Available Popular Categories

Categories on Home Page – I do not see a section where I can edit these categories in the back end. Can you please show me that section. I need to be able to change the names of these categories and the images inside these boxes.

I need to be able to edit this as well. I do not see the section to edit this text.

The screenshot shows a web form for listing a boat. On the left, a teal header contains the text 'at'. Below it, a grey box labeled 'Boat Information' with a blue circle containing the number '2' is visible. The form includes a 'Make *' dropdown menu currently set to 'Tiara', and a 'Model *' dropdown menu which is open, showing a search bar 'Search model...' and a list of models: '2800CC', '285 CC', '285CC', and '285 Open'. Below the list is a 'Load 20 More' link and a '+ Enter custom model' link. At the bottom, there are fields for 'Boat Size *' and 'Max Draft *'.

As Discussed last time the Make for example here is Tiara , The model list is not specific to Tiara. I sent the Model List for most of these brands Specific to the Make. If we can not make them match up we need to remove the models and Just make it manual input from the client. If it's faster lets just remove the models and make it manual input.

Length *	Beam Size *	Max Draft *
34	11	0
9	Feet	Inches
Class *	Material *	Fuel Type *
Select or type	Select or type	Select or type
Propeller Material *		
Select or type		
Number of Engines *	Number of Cabins *	Number of Heads *
1	Type here	Type here

We need to make a few of these optional - As some customers may not know the Beam, Max Draft, Material, Number of Cabins, Number of Heads...These I just listed need to be optional and not mandatory for creation. Can we do that please?

The screenshot shows a boat configuration form with a dropdown menu open for the 'Class' field. The dropdown menu lists the following options: 12, 14, 16, 18, 20, and a '+ Enter custom class' button. The background form shows the following fields and values:

- Length ***: 34
- Beam Size ***: 11
- Max Draft ***: 0
- Class ***: (Dropdown menu open)
- Material ***: (Dropdown menu open)
- Fuel Type ***: (Dropdown menu open)
- Propeller Material ***: (Dropdown menu open)
- Number of Engines ***: 1
- Number of Cabins ***: Type here
- Number of Heads ***: Type here

We need to remove these numbers and clean up this list.

Engine 1

Hours *	Make *
-2	Type here
Model *	Total Power (HP) *
Type here	Type here
Engine Type *	Propeller Type *
Select or type	Select or type

All of these should be optional except Engine Make. We need to make this much easier and much faster. People should be able to go back in and edit it after its live from their dashboard. The idea is to make this a two to three minute process for the customer so they don't get frustrated. Also where is the A.I. guidance for creation? It doesn't seem to be there.
